## FREEDOM OF INFORMATION ACT

### What does it do?

Gives you the right to obtain information held by Commonwealth Ministers, Departments and most statutory bodies (these bodies are called agencies under the Act).

Requires Commonwealth Government agencies to make available to members of the public:

- information about agencies, their functions and operations
- information about rules and practices which are used in making decisions which affect you.

Gives you a legal right to:

- see non exempt documents held by agencies, and
- appeal against a decision not to grant access to a document.

### What documents can you see?

The Act gives you the right to see documents lodged on or after 1 December 1977, or earlier if you need them to understand another document you have already.

Documents include files, reports, computer printouts, maps, plans, photographs, tape recordings, films or videotapes.

**Documents which are available for purchase under the Patents Act 1990, the Trade Marks Act 1995 or the Designs Act 2003 are not available under the Freedom of Information Act (Section 12 refers).**

### How do you apply?

Requests for access to documents must:

- Be in writing
- Provide sufficient information to enable identification of the documents requested
- Specify an address in Australia where notices can be sent and
- Be accompanied by the application fee (currently \$30.00) or specify an IP Australia account to which the charges will be posted.

Requests for documents should be addressed to IP Australia, PO Box 200 Woden, ACT 2606, or faxed to 02 6283 7999

(57) Statement of Newness and Distinctiveness: **The "standard" carabina style hook normally provides a "snap-lock" hook that clings securely to the anchor point. Standard carabin hooks therefore can only be used to clip to an anchor point smaller than about 20mm, or hooked back through a soft loop. This design innovation application has modified the carabina design so that it has the following features and advantages: the leading edge is purposefully angled so that it can be easily hooked into a hole as small as 10 mm approx, or clipped over an anchor point. A standard carabina hook will not allow this because of its shape; this design application allows it to secure easily to a hole in a plate surface, eg a hole drilled into a flat floor or a trailer bar, whereas that function is difficult to achieve with a standard carabina because it reverses back on itself; this design application has a working opening of 33mm allowing it to hook onto anchor points of up to 32mm without jamming, whereas the standard carabina opens up to only 22mm and allows anchoring onto points of about 20 mm width/diameter; this design innovation has no sharp edges and so avoids damaging the webbing of the strap to which it is attached. Normal carbinas damage their straps because of their sharp edges; the design's 10mm wire diameter offers higher capability for lashing and tying down loads than with thicker standard carabina hooks.**
