(57) Statement of Newness and Distinctiveness: **The design is 'New' - it was created by myself as a unique new cage guard for decorative pendant lamps. The design is 'Distinctive' - We are proud that it is a unique product and very differnt from all the other wire cage guards in the market today. The newness and distinctiveness of the design resides in the shape of the cage guard - the diamond shape has not been seen anywhere previously and the stricture of the wires into a shape of a geometrical diamond as one continuous piece form the basis of its shape and strength.**

- (57) Statement of Newness and Distinctiveness: Shape and configuration:- In the middle is a structure that is wider at one end and narrower at the other, (top and bottom) are parallel. At the narrower end, two openings exist, divided, that face the wider end. Two more openings exist which are opposite each other, but not parallel to each other in the middle of the vertical structures that make an arrangement so that one end is wide and the other is narrow. At a further specified distance, from the widest point, there is another structure that is wider than the previous description (top and bottom) are parallel. The whole structure is wider at one end and narrower at the other (top and bottom are parallel), allowing nine complete structures to be arranged in a circle and on top/below each other, with a circle space in the middle of the circle that is hence made.

(57) Statement of Newness and Distinctiveness: **The newness and distinctiveness of this design resides in a clamping fixture that allows for the mounting of a surface to a leg. The clamping fixture is built into the surface and allows the user to tighten the surface to the leg. This tightening is made possible by a small amount of flex in the surface substrate and a fixing that the user tightens. The shape of the leg and its corresponding hole are also part of the design. There are an unlimited number of structures possible, for example a table, a stool, shelf, entertainment unit, desk and combinations of these furniture items. These configurations are made possible because of the user configurable potential that the design allows. In a configuration using this design, a surface may incorporate one or many of the design to accommodate one or many legs to support the surface or other surfaces. The resulting range of furniture products are protected by this design as they are made possible by the use of this design.**
