GUIDE TO THE USE OF THIS JOURNAL

The Australian Official Journal of Patents (**AOJP**) reports on all the major events and actions which take place during the life cycle of an Australian patent and provides certain details of these actions as they relate to the patent or patent application involved. This guide sets out to teach the reader how to use the journal to access this information.

While there are many possible actions in the life of a patent, the majority of actions reported relate to the following events, which are the main stages in the progression of a patent application to a sealed patent:

(i) FILING –

This is the act of making an application. When the application is first filed certain details are published.

(ii) OPEN-TO-PUBLIC-INSPECTION (OPI) –

Approximately 18 months after first filing of an Australian or a corresponding foreign application, certain application documents, including the complete specification, become available to the public (Open-to-Public-Inspection or "OPI"). Relevant application details are published. In addition, an Abstracts Supplement to the AOJP contains abstracts of the inventive content of the OPI applications.

(iii) ACCEPTANCE -

This is the Commissioner's acceptance of a patent application. Once the Commissioner has accepted a patent application, certain details of the application are published in the AOJP. In addition, an Abridgments Supplement contains an abridgment (usually the broadest accepted claim and relevant drawing where appropriate) for each accepted application. Notice of opposition may be filed within three months of advertisement of acceptance.

(iv) OPPOSITION –

If an opposition action is commenced against the grant of the patent, the six-figure acceptance number and the name of the opponent are published.

(v) SEALING –

Most accepted applications are not opposed. These proceed to sealing and become granted patents. Of the few that are opposed (less than 1%) most of these, after resolution of the opposition, proceed to sealing and become granted patents. Sealed patents are simply listed in order of their six-figure acceptance number.

In addition to the actions related to these stages, other actions reported include: assignments, lapsing or withdrawal of applications and ceasing or expiry of patents, voluntary amendments, extensions of time for certain actions and registration of licences.

How To Identify Information Using "INID" Numbers

Patents are published in many different languages. As a result, finding the information that you want (eg the filing date) on a patent document or in a journal can be quite difficult. There is an international system operating, however, which codifies this information in an unambiguous way, by assigning a specific number to each piece of information about the history of a patent. These numbers are called the international agreed Numbers for the identification of Data or INID numbers.

These numbers appear on all published patents and abstracts and are used throughout this journal to identify particular items of information. For example, the data on which a document is filed has the INID number (22), while the name of the applicant has the INID number (71). These numbers are always expressed in parentheses and always immediately precede the information to which they relate. For example:

(22) 12.10.91

means that the filing date of the document which contains this reference is 12 October 1991. Learning the INID numbers for the information you want will help you find it quickly and easily.

A complete list of the INID numbers and the items to which they relate is provided at the end of this Guide.

How Australian Patent Documents are Numbered

Patent applications in Australia are assigned numbers at various stages in their processing. Each Australian application which proceeds to acceptance will have at least two (and sometimes more) different numbers during its life. When searching for information and ordering documents it is vital that you understand the numbering systems.

1. **Provisional Applications** are given a number with two characters and four numbers

e.g. **PM1234**

A provisional application number is identified by the INID number (21).

2. **Complete Applications** are given a five-figure application number followed by the last two digits of the year of filing

e.g. 12345/93

There are prefixes applied to this number which indicate whether the application has been accepted:

A document corresponding to an **unaccepted** application has the prefix, **AU-A**; e.g. AU-A-12345/93.

A document corresponding to an **accepted** application carries the prefix **AU-B**; e.g. AU-B-12345/93.

Users need to be aware that an accepted document may differ from the corresponding unaccepted document. This is because **amendment** may occur between first publication (OPI) and second publication (acceptance).

A five-figure application number is identified by the INID numbers (11) or (21).

3. When a patent application is **accepted** it is given a six-figure document number in addition to the five-figure application number
e.g. 123456

This is the number you must use to keep track of the application in the AOJP from now on. It is identified by the INID number (10).

NOTE: When ordering any patent document from us, whether accepted or not, please quote the five-figure application number preceded by the appropriate prefix.

Arrangement of Information in the Journal

For each of the categories

- (i) Provisional Applications Filed,
- (ii) Complete Applications Filed
- (iii) Applications Open to Public Inspection, and
- (iv) Applications Accepted

The Journal lists the information published in that category in an alphabetical **Name Index** list based on the name of the applicant. These indices are useful if you wish to find information about applications made by a particular applicant.

In addition to the Name Index there is provided, for each of these categories, a **Numerical Index**. This index lists the applications either in order of their five-figure Application Numbers, in the case of complete applications filed and applications OPI, or in order of their six-figure Document Number in the case of accepted applications. It provides, for each number, the name of the applicant. These indices are useful if you wish to track the progress of a particular patent application.

There are also **IPC indices** provided for applications which are OPI and for applications which have been accepted. IPC stands for International Patent Classification. Each IPC symbol is an alpha-numerical representation of a particular area of technology. These indices are in order of IPC symbol, and within each symbol provide either the five-figure application numbers of the applications which are now OPI or the six-figure numbers of the cases now accepted. These indices are useful if you wish to check on patent activity in a particular technology.

Using the Indices

1. To Find Patent Information If You Know the Name of the Applicant.

Use the Name Indices. They will give you the following information identified by their INID number:

<u>ITEM</u>	<u>INID No.</u>	<u>ITEM</u>	<u>INID No.</u>

You will notice at each stage of following an application through that all applications are in alphabetical order of Applicant, not inventor.

2. To Find Information About a Patent Application If You Know Its Number.

Use the appropriate numerical index. This will give you the name of the applicant from the number. You will then need to use the appropriate Name Index as above to find out other information about the Patent Application you are interested in.

The following Numerical Indices are available:

- A) **Provisional** Applications filed.
- B) **Complete** Applications filed.
- C) Applications **Open to Public Inspection**.
- D) Applications **Accepted** (note that this uses six-figure document numbers rather than five-figure application numbers).

3. To Find Information About Patent Documents in the Technical Subject that You are Interested in if You Know the International Patent Classification Symbol for that Technical Subject.

All patent applications are classified according to their technical subject matter using the International Patent Classification (**IPC**). Although the system is very detailed and covers all technologies, knowledge of the IPC symbols of the technical subject that you are interested in will allow you to find patent documents in those technologies quite easily. To identify the IPC symbols for the technical subject that you are interested in, please consult the official IPC web page at <http://www.wipo.int/classifications/ipc/ipc8>. This web page has extra aids to locate the classification symbols such as a catchword index, definitions and illustrations. The IPC symbols may appear in publications in boldface (for "invention information") or regular typeface (for "additional information"). The italic typeface indicates that IP Australia classifies into the advanced level of IPC. The version indicator after each IPC symbol, e.g. (2006.01), indicates the year and the month that the symbol first appeared in IPC.

The indices to use are

- A) Applications **OPI** – IPC Index
- B) Applications **Accepted** – IPC Index.

These indices give you the numbers of the applications which are either OPI or Accepted and are listed in order of their IPC symbols.

Once you have the numbers of the documents that interest you, consult the relevant Number Index (see 2. above) to find the applicant's name, and then the Name Index (see 1. above) to find out the details of that application.

AUSTRALIAN OFFICIAL JOURNAL OF PATENTS (Supplement) 12 July 2007**ABSTRACTS OF DECISIONS****DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS**

Application	:	No. 2004203855 in the name of ZENON TECHNOLOGY PARTNERSHIP
Title	:	Vertical skin of hollow fiber membranes and method of maintaining clean fiber surfaces
Action	:	Opposition under Section 59 of the Patents Act by MEMCOR AUSTRALIA PTY LTD and an application for an extension of time under Regulation 5.10 to serve evidence in support.
Decision	:	Issued 29 June 2007.

Abstract

This is an opposition to a request for an extension of time of three months to file evidence in support. One previous extension of three months had already been granted. Delays leading to this extension have largely resulted from Professor Leslie's holiday, his regular work and his wife's unexpected surgery. Memcor has provided a reasonable explanation for the delay. The considerations behind the private interests of the parties and the public interest also support the extension.

Extension of time allowed.

Costs awarded against the applicant Zenon.

ABSTRACTS OF DECISIONS**DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS**

Application	:	No. 775758 in the name of Roberto De Toffol
Title	:	A Method of Manufacturing Syntactic Foam
Action	:	Opposition to the grant of a patent by The University of Newcastle Research Associates Limited
Decision	:	Issued 29 June 2007.

Abstract

The present invention relates to a method of making syntactic foams (a composite material comprising a resin matrix and hollow microspheres) using slip casting techniques. The opposition derives from a final year project that the applicant, Mr De Toffol completed during 1999 under the supervision of Dr Kim. The opponent, TUNRA, alleged that Mr De Toffol was not the inventor or not the sole inventor of the present invention, and was therefore not entitled to the grant of the patent. The opponent did not appear or provide submissions at hearing, but their evidence was to the effect that Dr Kim had directed Mr De Toffol to use slip casting techniques as part of his project. The evidence was determined to be inconsistent with Dr Kim's account of events, and there was furthermore no apparent material contribution by Dr Kim to the final concept. The opposition therefore failed on the grounds of entitlement.

While the opponent did not address the issues of novelty and inventive step in evidence, regard was had to a document raised in the Statement of Grounds and Particulars against Claims 30 and 32. Claims 30 and 32 were found both novel and inventive in view of this document.

Costs were awarded against the opponent.

ABSTRACTS OF DECISIONS**DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS**

Application	:	No. 751088 in the name of Aristocrat Technologies Australia Pty Ltd
Title	:	Mystery Jackpot controller
Action	:	Opposition under Section 59 by IGT , an objection to an application under Regulation 5.10(2) for an extension of time in which to serve evidence in reply
Decision	:	Issued 29 June 2007.

Abstract

The opponent has not shown a lack of due diligence in the preparation of their evidence as the problems with the expert's availability and late withdrawal were largely out of their control. However, the opponent's on-going problems cannot be used to justify indefinite extensions. The current delays have to be considered in light of the total time the opponent has taken to prepare their evidence and what further delays are now being anticipated. This opposition has been on-going since November 2002 and it is in the public interest to resolve questions regarding the validity (or otherwise) of the patent as soon as possible.

The opponent has advised that they should be able to complete their evidence within the current extension period. If the evidence is important as the opponent has alleged, the short extension is in the public interest. However any further extensions are not appropriate.

To that end, a conditional-type extension similar to that proposed by the delegate in *Ancor Packaging (Australia) Pty Ltd v Barokes Pty Ltd* [2004] APO 20 (14 July 2004) and *Aristocrat v Acres Gaming* [2005] APO 27 (20 May 2005) was allowed.
