GUIDE TO THE USE OF THIS JOURNAL

The Australian Official Journal of Patents (AOJP) reports all major events and actions which take place during the life cycle of an Australian patent and provides certain details of these actions as they relate to the patent or patent application involved. This guide sets out to teach the reader how to use the journal to access this information.

While there are many possible actions in the life of a patent, the majority of actions reported relate to the following events, which are the main stages in the progression of a patent application to a sealed patent:

(i) FILING -

This is the act of making an application. When the application is first filed certain details are published.

(ii) OPEN-TO-PUBLIC-INSPECTION (OPI) -

Approximately 18 months after first filing of an Australian or a corresponding foreign application, certain application documents, including the complete specification, become available to the public (Open-to-Public-Inspection or "OPI"). Relevant application details are published.

(iii) ACCEPTANCE –

This is the Commissioner's acceptance of a patent application. Once the Commissioner has accepted a patent application, certain details of the application are published in the AOJP. Notice of opposition may be filed within three months of advertisement of acceptance.

(iv) OPPOSITION –

If an opposition action is commenced against the grant of the patent, the six-figure acceptance number and the name of the opponent are published. If the opposition is to the Certification of an Innovation Patent, the patent number and the name of the opponent are published.

(v) SEALING –

Most accepted applications are not opposed. These proceed to sealing and become granted patents. Of the few that are opposed (less than 1%) most of these, after resolution of the opposition, proceed to sealing and become granted patents. Sealed patents are simply listed in order of their application number.

(vi) CERTIFICATION

This is the Commissioner's Certification after passing examination of a previously granted unexamined Innovation Patent.

In addition to the actions related to these stages, other actions reported include: assignments, lapsing or withdrawal of applications and ceasing or expiry of patents, voluntary amendments, extensions of time for certain actions and registration of licences.

How To Identify Information Using "INID" Numbers

Patents are published in many different countries and in many different languages. As a result, finding the information that you want (eg the filing date) on a patent document or in a journal can be quite difficult. There is an international system operating, however, which codifies this information in an unambiguous way, by assigning a specific number to each piece of information about the history of a patent. These numbers are called the **Internationally agreed Numbers for the Identification of Data** or INID numbers.

These numbers appear on all published patents and abstracts and are used throughout this journal to identify particular items of information. For example, the date on which a document is filed has the INID number (22), while the name of the applicant has the INID number of (71). These numbers are always expressed in parentheses and always immediately precede the information to which they relate. For example:

(22) 12.10.91

means that the filing date of the document which contains this reference is 12 October 1991. Learning the INID numbers for the information you want will help you find it quickly and easily.

A complete list of the INID numbers and the items to which they relate is provided at the end of this Guide.

How Australian Patent Documents are Numbered

Patent applications in Australia are assigned a number at the filing stage in their processing. Each Australian application will retain the same number throughout its life, though different numbers may be associated to the application. The number will incorporate the year of lodgment then a unique number within the appropriate range.

There will be number ranges for types of patents:

100,000 – 199,999 Innovation
200,000 – 799,999 Standard
800,000 – 899,999 Petty
900,000 – 999,999 Provisional

When searching for information and ordering documents it is vital that you understand the numbering systems.

1. **Provisional Applications** are given a ten-figure number

e.g. 2002901123

A provisional application number is identified by the INID number (21).

2. **Complete and Innovation Applications** are also given a ten-figure application number

e.g. 2002200345 Standard

2002100123 Innovation

There are prefixes applied to this number which indicate whether the application has been accepted:

A document corresponding to an unaccepted application has the prefix, AU-A; eg AU-A-2002200234.

A document corresponding to an accepted application carries the prefix AU-B; eg AU-B-2002200234.

Users need to be aware that an accepted document may differ from the corresponding unaccepted document. This is because amendment may occur between first publication (OPI) and second publication (acceptance).

A ten-figure application number is identified by the INID number (21).

NOTE: When ordering any patent document from us, whether accepted or not, please quote the ten-figure application number preceded by the appropriate prefix.

Arrangement of Information in the Journal

For each of the categories

- (i) Provisional Applications Filed,
- (ii) Complete Applications Filed,
- iii) Applications Open to Public Inspection
- (iv) Applications Entered National Phase
- (v) Applications Accepted, and
- (vi) Innovation Patent Certified.

The Journal lists the information published in that category in an alphabetical Name Index list based on the name of the applicant. These indices are useful if you wish to find information about applications made by a particular applicant.

In addition to the Name Index there is provided, for each of these categories, a Numerical Index This index lists the applications either in order of their five-figure Application Numbers, in the case of complete applications filed and applications OPI, or in order of their six-figure Document Number in the case of accepted applications. It provides, for each number, the name of the applicant. These indices are useful if you wish to track the progress of a particular patent application.

There are also IPC Indices provided for applications which are OPI and for applications which have been accepted. IPC stands for International Patent Classification. Each IPC "mark" is an alpha-numerical representation of a particular area of technology. These indices are in order of IPC mark, and within each mark provide either the five-figure application numbers of the application which are now OPI or the six-figure numbers of the cases now accepted. These indices are useful if you wish to check on patent activity in a particular technology.

Using the Indices

1. To Find Patent Information if You Know the Name of the Applicant.

Use the Name Indices. They will give you the following information identified by their INID number:

<u>ITEM</u>	<u>INID</u> <u>No.</u>	<u>ITEM</u>	<u>INID</u> <u>No.</u>

You will notice at each stage of following application through that all applications are in alphabetical order of **Applicant**, not inventor.

2. To Find Information About a Patent Application if You Know its Number.

Use the appropriate numerical index. This will give you the name of the applicant from the number. You will then need to use the appropriate Name Index as above to find out other information about the Patent Application you are interested in.

The following Numerical Indices are available:

- A) **Provisional** Applications filed.
- B) **Complete** Applications filed.
- C) Innovation Applications filed.
- D) Applications **Open to Public Inspection**.
- E) Applications **Accepted**.
- F) Innovation Patent Certified

3. To Find Information About Patent Documents in the Area of Technology in which You are Interested if You Know the International Patent Classification Mark for that Area.

All patent applications are classified according to their subject matter using the International Patent Classification (IPC). Although the system is very detailed and covers all technologies, knowledge of the IPC marks of the technologies you are interested in will allow you to find patent documents in these technologies quite easily. To identify the IPC marks of technologies you are interested in, you can inspect relevant documentation in any of AIPO's state offices.

The indices to use are

- A) Applications **OPI** - IPC Index
- B) Applications **accepted** - IPC Index.

These indices give you the numbers of the applications which are either OPI or Accepted and are listed in order of their IPC marks.

Once you have the numbers of the documents that interest you, consult the relevant Number Index (see 2. above) to find the applicant's name, and then the Name Index (see 1. above) to find out the details of that application.

'INID' NUMBERS in use on Australian Patent Documents

'INID' is an acronym for 'Internationally agreed Numbers for the Identification of Data'.

(10) Document identification

- (11) Number of the document
- (12) Plain language designation of the kind of document
- (19) WIPO country code, or other identification, of the country publishing the document.

(20) Document filing data

- (21) Number(s) assigned to the application(s).
- (22) Date(s) of filing application(s)
- (23) Other date(s) of filing, including exhibition filing date and date of filing complete specification following provisional specification.
- (24) Date from which industrial property rights may have effect.

(30) Priority data

- (31) Number(s) assigned to priority application(s)
- (32) Date(s) of filing priority application(s)
- (33) Country (countries) in which the priority application(s) was (were) filed.

(40) Date(s) of making available to the public

- (43) Date of publication by printing or similar process of an unexamined document, on which no grant has taken place on or before the said date.
- (44) Date of publication by printing or similar process of an examined document, on which no grant has taken place on or before the said date.
- (45) Date of publication by printing or similar process of a document, on which grant or certification has taken place on or before the said date.

(50) Technical Information

- (51) International Patent Classification
- (52) Domestic or national classification

- (54) Title of invention
- (56) List of prior art documents, if separate from descriptive text
- (57) Abstract or claim

(60) Reference(s) to other legally related domestic document(s)

- (60) Related by cognate(s).
- (61) Related by addition(s).
- (62) Related by division(s).

(70) Identification of parties concerned with the document

- (71) Name(s) of applicant(s)
- (72) Name(s) of inventor(s) if known to be such
- (74) Name(s) of attorney(s) or agent(s)
- (75) Name(s) of inventor(s) who is (are) also applicant(s)

(80) Identification of data related to International Conventions other than the Paris Convention

- (86) PCT Application Number
- (87) PCT Publication Number

NOTE

- (1) Australian patent documents published on or after 26 October 1978 should be referred to by the application number preceded by the prefix AU-A or AU-B.

AU-A = Pre-examination

AU-B = Post-examination

- (2) The classification used is the International Patent Classification and is identified by the INID code (51). Further editions of the classification are identified as (51)₂, (51)₃, (51)₄ and (51)₅.
- (3) INID code 74 provides for the name of the patent attorney, or firm of attorneys, prosecuting an application.

Signature Requirements

Many forms used for actions under the *Patents Act*, *Trade Marks Act*, *Designs Act* and *Plant Breeder's Rights Act* require a signature. This notice provides guidance on the acceptable form of that signature.

Under the various legislation there are a number of provisions that explicitly require a signature. There are also requirements for declarations under the Acts or under other relevant legislation. In those situations, a signature is required.

Where the requirement of a signature arises solely from the prescribed form, the typed name of the person completing the form, or the name of the person who is their agent, may be used in place of a signature. This is on the basis that the person who has applied their name, or approved someone else to apply their name, can be taken to have approved the content of the form. This would also be an appropriate principle to apply to other correspondence such as responses to examination reports.

The typed name of a firm (e.g. of attorneys or lawyers) is not acceptable as a signature.

The Register of Patents

The Commissioner of Patents maintains a Register of Patents containing details of standard patents and innovation patents.

The Register contains particulars of patents in force. The particulars that are recorded in the Register are as follows:

- Patent number
- The name and address of the patentee(s)
- The name of the inventor(s)
- Title of the patent
- Term of the patent
- Date accepted
- Date sealed
- Date of patent
- Status of the patent
- Expiry date
- Date ceased
- Date revoked
- Priority details
- Divisional and/or additional details
- Issuing of duplicate deeds
- Alteration or correction of ownership details
- Mortgagee, licensee or other interests
- Transfer of entitlement to the patent or licence, or a share in the patent or licence
- Extension of term
- Restoration
- Court orders

The Register is prima facie evidence of any particulars registered in it (section 195(1)).

Pursuant to section 186(2), the Register may be kept wholly or partly by use of a computer.

Until 9 February 2009, the Register was held solely in paper form, and entries in the Register were made manually. An alteration to an entry in the Register occurred by manually “striking through” a reference to the relevant entry and then making a notation as to the reason for the strike through. Therefore when a correction was made, all reference to the amended entry was not omitted; it was still possible to read the previous position. A copy of a paper Register entry can be obtained from the Commissioner.

From 9 February 2009, the Register changed to electronic form for all patents sealed from 24 May 2001. These patents are covered solely by the electronic Register. The Register is embodied in a series of electronic databases where the particulars of patents are kept. Data is extracted from these databases and appears to the public via the AusPat system (<http://pericles.ipaustralia.gov.au/ols/auspat>). What appears on AusPat is not the Register.

When required, an extract from the Register is produced as an automated function by extracting data from the source databases. This extract can be obtained from the AusPat system. The extract contains the same types of information that were recorded in the paper Register. The extract contains the most recent particulars in relation to the patent, as well as the details of the most recent change (if any) to a particular. Some Court orders do not presently appear in the extract. If required for the purposes of section 195(2), a signed copy of the extract from the Register can be obtained from the Commissioner, and is admissible in any proceedings as prima facie evidence of those particulars. Requests for a signed copy of an extract from the Register should be directed to IP Australia, through any of the normal communication channels.

The full Register differs from the extract in that it includes the full transaction history of the particulars that appear in the extract, and all Court orders. A full Register entry is not available as an automated function, but can be prepared manually if required.

The Register is restricted to the particulars that are listed above, and does not include other information in relation to the patent that is stored in the electronic databases, such as the specification of the patent.

ABSTRACTS OF DECISIONS

DECISION OF A DELEGATE OF THE COMMISSIONER OF PATENTS

Application	:	No. 2006202679 in the name of RICHWOOD CREEK PTY LTD
Title	:	An Apparatus for a Vehicle
Action	:	Opposition thereto under S59 of the Patents Act (1990) by DANNY LEE WILLIAMS
Decision	:	Issued 26 June 2009.

Abstract

The application was filed in the name of Richwood Creek Pty Ltd naming two inventors Danyl (known as Danny) Lee Williams and Andrew James Mueller as inventors. Danny Lee Williams opposed the grant on the grounds of entitlement only.

The statement of grounds and particulars alleged:

- That the true inventors are the opponent and Mr Thomas Kreskas who is a director of Norkres Pty Ltd and that Danny Lee Williams was at the relevant time an employee of Norkres Pty Ltd
- Mr Andrew Mueller was incorrectly identified as an inventor and did not contribute in any material way to the invention
- Mr Mueller's work involved machining and assembling of the apparatus which was paid for by Norkres Pty Ltd
- Provisional application 2005901452 and PCT/AU2006/000377 and Australian Patent 2006202679 were wrongly proceeding in the name of Richwood rather than the rightful owner, Norkres Pty Ltd
- That the invention described and claimed in the patent application was obtained from the rightful owner, Norkres Pty Ltd

The opponent sought that Mr Tom Kreskas be recorded as inventor, that Mr Andrew Mueller be struck out as an inventor and that Norkres Pty Ltd be recorded as the nominated person. However, the delegate considered that an action under S59 does not, per se, give rise to a change of nominated persons.

While the assignment to Richwood Creek Pty Ltd dated 9 November 2005 was accepted, the evidence suggested that Mr Williams was under a contract of service to

Norkres Pty Ltd at the relevant time and that Mueller Engineering Pty Ltd was under a similar contract but only in relation to the build of the Hemi supercharger prototypes, not in relation to intellectual property rights. However, the conduct of the parties as seen through the evidence of the emails points to vesting of the ownership in the Hemi supercharger to Norkres and that Kreskas and Williams seem content with this arrangement. Therefore, given the nature of the relationship and the tasks that Williams' was charged with, the delegate considered that it was reasonable to conclude that Williams was under a contract of service so that Williams' rights vested under S15 to Norkres.

The statements of Richwood's patent attorney Mr Cliff Carew are significant and highly probative of the facts stated therein. Mr Carew, who was in a position to understand the circumstances of the parties, has listed Mr Williams and Mr Mueller as inventors in the PCT application. The delegate considered that the evidence suggested, on the balance of probabilities, that Mr Williams and Mr Mueller are co-inventors.

The delegate considered whether there may be a demarcation line between the parties such that the rights to the Hemi engine vested with Norkres while the rights outside of this embodiment vested with Richwood by way of assignment. While this would suggest that Williams' residual rights were assigned to Richwood, on the balance of probabilities, the delegate considered there was insufficient evidence to show that this is the case.

Mr Carew further declared that he was not aware of any contribution by Mr Kreskas or Norkres Pty Ltd. While Mr Williams, Mr Norris and Mr Kreskas' declarations support Mr Kreskas as an inventor and Norkres Pty Ltd as a nominated person, the Carew declaration does not support any of these claims. There is no evidence of Mr Kreskas' direct contribution to the development of the invention apart from his employment of Mr Williams. Consequently, on the balance of probabilities, the delegate found that Mr Kreskas is not an inventor.

In relation to the devolution from Mr Kreskas to Norkres Pty Ltd the delegate found that the evidence is insufficient to demonstrate that if Mr Kreskas was an inventor S15 would be enlivened to give effect to Norkres Pty Ltd as a nominated person.

While the principles of equitable estoppel can apply, the delegate found that the case of Mr Williams being estopped from denying the assignment has not been made out. The evidence that Norkres Pty Ltd employed Mr Williams was accepted by the delegate and consequently, Norkres Pty Ltd is entitled to be a nominated person.

It was noted that Australian Innovation Patent 2006100925 was filed as a divisional of the current application on 30 October 2006 and was certified on 28 February 2007. Furthermore, Australian Patent Application 2009200603 was filed on 17 February 2009 as a divisional of the current application. This further application was filed in the name of Norkres Pty Ltd and lists Thomas Kreskas and Danyl Lee Williams as inventors.

The delegate noted that a number of patent documents were raised in the corresponding US family member US 20070169672, which is a continuation of

application number PCT/AU06/000377. While the delegate acknowledged that the respective patent laws differ between jurisdictions, the documents raised by the US examiner may be relevant in the prosecution of divisional Australian Patent Application 2009200603, should that occur. The documents identified are as follows:

D1: US 6029637 A (PRIOR) 29 February 2000

D2: US 2963006 A (KARDE) 12 July 1957

D3: US 5085199 A (SADO) 4 February 1992

There is evidence that indicates prior use, although the evidence is far from conclusive. This issue will need to be considered if the divisional application proceeds to acceptance.

The opposition was successful on the ground of entitlement. Subject to an appeal, the application was refused. No award of costs was made.
