GUIDE TO THE USE OF THIS JOURNAL

The Australian Official Journal of Patents (AOJP) and the Supplement to the AOJP reports all major events and actions which take place during the life cycle of an Australian patent and provides certain details of these actions as they relate to the patent or patent application involved. This guide sets out to teach the reader how to use the journal & supplement to access this information.

While there are many possible actions in the life of a patent, the majority of actions reported relate to the following events, which are the main stages in the progression of a patent application to a granted patent:

(i) FILING -

This is the act of making an application. When the application is first filed certain details are published.

(ii) OPEN-TO-PUBLIC-INSPECTION (OPI) -

Approximately 18 months after first filing of an Australian or a corresponding foreign application, certain application documents, including the complete specification, become available to the public (Open-to-Public-Inspection or "OPI"). Relevant application details are published.

(iii) ACCEPTANCE –

This is the Commissioner's acceptance of a patent application. Once the Commissioner has accepted a patent application, certain details of the application are published in the AOJP. Notice of opposition may be filed within three months of advertisement of acceptance.

(iv) OPPOSITION –

If an opposition action is commenced against the grant of the patent, the application number and the name of the opponent are published. If the opposition is to the Certification of an Innovation Patent, the patent number and the name of the opponent are published.

(v) GRANTING –

Most accepted applications are not opposed. These proceed to grant and become granted patents. Of the few that are opposed (less than 1%) most of these, after resolution of the opposition, proceed to grant and become granted patents. Granted patents are simply listed in order of their patent number.

(vi) CERTIFICATION

This is the Commissioner's Certification after passing examination of a previously granted unexamined Innovation Patent.

In addition to the actions related to these stages, other actions reported include: assignments, lapsing or withdrawal of applications and ceasing or expiry of patents, voluntary amendments, extensions of time for certain actions and registration of licences.

How To Identify Information Using "INID" Numbers

Patents are published in many different countries and in many different languages. As a result, finding the information that you want (eg the filing date) on a patent document or in a journal can be quite difficult. There is an international system operating, which codifies this information in an unambiguous way, by assigning a specific number to each piece of information about the history of a patent. These numbers are called the **Internationally agreed Numbers for the Identification of Data** or INID numbers.

These numbers appear on all published patents and abstracts and are used throughout this journal to identify particular items of information. For example, the date on which a document is filed has the INID number (22), while the name of the applicant has the INID number of (71). These numbers are always expressed in parentheses and always immediately precede the information to which they relate. For example:

(22) 12.10.91

means that the filing date of the document which contains this reference is 12 October 1991. Learning the INID numbers for the information you want will help you find it quickly and easily. A complete list of the INID numbers and the items to which they relate is provided at the end of this Guide.

How Australian Patent Documents are Numbered

When searching information or ordering documents it is vital that you understand the numbering system.

Document Numbering in the **Australian Official Journal of Patents**

Australian provisional applications are assigned a 2 letter code followed by 4 digits. This is a unique series of numbers. Australian patent applications are assigned a unique series of 5 digit numbers followed by the year of lodgement at filing. At acceptance the application is assigned a 6 digit number, this again is a unique series of numbers.

1. Provisional Applications are given a 2 letter code followed by 4 unique numbers
e.g. PR1326
2. Standard Complete applications (including Petty patents) are given a 5 digit number. Followed by the year of lodgement
e.g. 56490/99
3. At acceptance Standard Completes (including Petty patents) are given a 6 digit number
e.g. 698745

Document Numbering in the **Supplement to the Australian Official Journal**

Australian patent applications are assigned a 10 digit number at filing. Each Australian application will retain the same number throughout its life. The first four numbers of the application will be the year of lodgement followed by a unique series of numbers.

1. Provisional Applications are given a 10 digit number, this is the year of lodgement followed by a '9' then a series of unique numbers.
e.g. 2012907896
2. Standard Complete applications are also given a 10 digit number. Standard Completes are identified by 4 digit year of lodgement followed by a '2' or '3' then a series of unique numbers. Innovations are identified by the 4 digit year of lodgement followed by a '1' then followed by a unique series of numbers.
e.g. 2011236254 (Standard Complete)
e.g. 2011158589 (Innovation)

Different prefixes will be associated to the application/patent at different stages of its life. This prefix indicates whether the application has been accepted.

A document corresponding to an unaccepted application has the prefix, AU-A; eg AU-A-2002200234.
A document corresponding to an accepted application carries the prefix AU-B; eg AU-B-2002200234.

Users need to be aware that an accepted document may differ from the corresponding unaccepted document. This is because amendment may occur between first publication (OPI) and second publication (acceptance).

NOTE: When ordering any patent document from us, whether accepted or not, please quote the application/patent number preceded by the appropriate prefix.

Arrangement of Information in the Journal

For each of the categories

- (i) Provisional Applications Filed,
- (ii) Complete Applications Filed,
- iii) Applications Open to Public Inspection
- (iv) Applications Accepted, and
- (v) Innovation Patent Certified.

The Journal lists the information published in that category in an alphabetical Name Index list based on the name of the applicant. These indices are useful if you wish to find information about applications made by a particular applicant.

In addition to the Name Index there is provided, for each of these categories, a Numerical Index This index lists the applications either in order of their Application Numbers, in the case of complete applications filed and applications OPI, or in order of their Document Number in the case of accepted applications. It provides, for each number, the name of the applicant. These indices are useful if you wish to track the progress of a particular patent application.

There are also IPC Indices provided for applications which are OPI and for applications which have been accepted. IPC stands for International Patent Classification. Each IPC "mark" is an alpha-numerical representation of a particular area of technology. These indices are in order of IPC mark, and within each mark provide either the application numbers of the application which are now OPI or the numbers of the cases now accepted. These indices are useful if you wish to check on patent activity in a particular technology.

Using the Indices

1. To Find Patent Information if You Know the Name of the Applicant.

Use the Name Indices. They will give you the following information identified by their INID number:

<u>ITEM</u>	<u>INID</u> <u>No.</u>	<u>ITEM</u>	<u>INID</u> <u>No.</u>
A) Provisional applications filed - Name Index		B) Complete applications filed - Name Index

Inventors <u>names</u>	(72)
<u>Patent Attorneys</u>	(74)
Related by division	(62)

You will notice at each stage of following application through that all applications are in alphabetical order of **Applicant**, not inventor.

2. To Find Information About a Patent Application if You Know its Number.

Use the appropriate numerical index. This will give you the name of the applicant from the number. You will then need to use the appropriate Name Index as above to find out other information about the Patent Application you are interested in.

The following Numerical Indices are available:

- A) **Provisional** Applications filed.
- B) **Complete** Applications filed.
- C) Innovation Applications filed.
- D) Applications **Open to Public Inspection**.
- E) Applications **Accepted**.
- F) Innovation Patent Certified

3. To Find Information About Patent Documents in the Area of Technology in which You are Interested if You Know the International Patent Classification Mark for that Area.

All patent applications are classified according to their subject matter using the International Patent Classification (IPC). Although the system is very detailed and covers all technologies, knowledge of the IPC marks of the technologies you are interested in will allow you to find patent documents in these technologies quite easily. To identify the IPC marks of technologies you are interested in, you can inspect relevant documentation in any of AIPO's state offices.

The indices to use are

- A) Applications **OPI** - IPC Index
- B) Applications **accepted** - IPC Index.

These indices give you the numbers of the applications which are either OPI or Accepted and are listed in order of their IPC marks.

Once you have the numbers of the documents that interest you, consult the relevant Number Index (see 2. above) to find the applicant's name, and then the Name Index (see 1. above) to find out the details of that application.

'INID' NUMBERS in use on Australian Patent Documents

'INID' is an acronym for 'Internationally agreed Numbers for the Identification of Data'.

(10) Document identification

- (11) Number of the document
- (12) Plain language designation of the kind of document
- (19) WIPO country code, or other identification, of the country publishing the document.

(20) Document filing data

- (21) Number(s) assigned to the application(s).
- (22) Date(s) of filing application(s)
- (23) Other date(s) of filing, including exhibition filing date and date of filing complete specification following provisional specification.
- (24) Date from which industrial property rights may have effect.

(30) Priority data

- (31) Number(s) assigned to priority application(s)
- (32) Date(s) of filing priority application(s)
- (33) Country (countries) in which the priority application(s) was (were) filed.

(40) Date(s) of making available to the public

- (43) Date of publication by printing or similar process of an unexamined document, on which no grant has taken place on or before the said date.
- (44) Date of publication by printing or similar process of an examined document, on which no grant has taken place on or before the said date.
- (45) Date of publication by printing or similar process of a document, on which grant or certification has taken place on or before the said date.

(50) Technical Information

- (51) International Patent Classification
- (52) Domestic or national classification
- (54) Title of invention
- (56) List of prior art documents, if separate from descriptive text
- (57) Abstract or claim

(60) Reference(s) to other legally related domestic document(s)

- (60) Related by cognate(s).
- (61) Related by addition(s).
- (62) Related by division(s).

(70) Identification of parties concerned with the document

- (71) Name(s) of applicant(s)
- (72) Name(s) of inventor(s) if known to be such
- (74) Name(s) of attorney(s) or agent(s)
- (75) Name(s) of inventor(s) who is (are) also applicant(s)

(80) Identification of data related to International Conventions other than the Paris Convention

- (86) PCT Application Number
- (87) PCT Publication Number

NOTE

- (1) Australian patent documents published on or after 26 October 1978 should be referred to by the application number preceded by the prefix AU-A or AU-B.

AU-A = Pre-examination

AU-B = Post-examination

- (2) The classification used is the International Patent Classification and is identified by the INID code (51). Further editions of the classification are identified as (51)₂, (51)₃, (51)₄ and (51)₅.
- (3) INID code 74 provides for the name of the patent attorney, or firm of attorneys, prosecuting an application.

(54) Visionmod, the all-new flat-pack modular vision Storage Cage/Stillage is a game-changer for the storage and handling industry in that the system is totally modular. Whether the end-user chooses 4 fixed sides, or 1 or 2 removable gates, the system can handle it. This multi-functionality is achieved by choosing the relevant components of the modular system. The 2 side panels are always the same, and depending on whether the end-user chooses 4 fixed sides or 1 or 2 removable gates will determine which front and back panels they use. There are also height options.

 (54) Pimple Popper. This is a device for effectively releasing the built up oil of the pimple, especially ones under the skin. It consists of a needle inside a small round cylinder that is put over the pimple and gently pushed down at the same time as pushing the needle, this releases the pimple oil under the skin while the device gently squeezes at the same time.

CLAIMS

1. An excavator wear member comprising:

a body;

a side wall having a mounting ear extending rearwardly of the body;

5 a socket cavity extending into the body and at least partially defined by the side wall, an upper wall and a lower wall, the socket cavity being symmetrical about a horizontal plane of the excavator wear member;

a locking aperture extending through the side wall of the excavator wear member, the locking aperture having a receiving passage having a generally circular main portion and a retaining recess having a generally circular main portion that is generally concentric with the generally circular main portion of the receiving passage;

10 wherein, the receiving passage extends inwardly toward the socket cavity from an outer face of the side wall and the retaining recess is located on an inner face of the side wall and the diameter of the generally circular main portion of the retaining recess is larger than the diameter of the generally circular main portion of the receiving passage such that the receiving passage terminates at the retaining recess, and wherein a planar locking face is located at an end of the retaining recess proximal the receiving passage.

2. An excavator wear member as claimed in claim 1, wherein at least a part of the locking aperture extends through the mounting ear.

3. An excavator wear member as claimed in any one of claims 1, 2, 4 or 5, wherein the planar locking face faces inwardly towards, and is open to, the socket cavity.

5 4. An excavator wear member adapted to be releasably mountable on an adaptor, the adaptor having a spigot portion and a mounting recess located on a side wall of the adaptor, the excavator wear member comprising:

a body;

10 a side wall having a mounting ear extending rearwardly of the body and adapted to be at least partially located within the mounting recess of the adaptor;

a socket cavity extending into the body and at least partially defined by the side wall, an upper wall and a lower wall, the socket cavity being
15 symmetrical about a horizontal plane of the excavator wear member and adapted to receive the spigot portion of the adaptor;

a locking aperture extending through the side wall of the excavator wear member, the locking aperture having a receiving passage having a generally circular main portion and a retaining recess having a generally
20 circular main portion that is generally concentric with the generally circular main portion of the receiving passage;

wherein, the receiving passage extends inwardly toward the socket cavity from an outer face of the side wall and the retaining recess is located on an inner face of the side wall and the diameter of the generally circular

main portion of the retaining recess is larger than the diameter of the generally circular main portion of the receiving passage such that the receiving passage terminates at the retaining recess, and wherein a planar locking face is located at an end of the retaining recess proximal the receiving passage.

5
5. An excavator wear member comprising:

a body;

a side wall having a mounting ear extending rearwardly of the body;

10 a socket cavity extending into the body and at least partially defined by the side wall, an upper wall and a lower wall, the socket cavity being symmetrical about a horizontal plane of the excavator wear member;

a locking aperture extending through the side wall of the excavator wear member, the locking aperture having a receiving passage that has a cross sectional outline that is formed at least in part from an arcuate portion and a retaining recess that has a cross sectional outline that is formed at least in part from an arcuate portion;

15
20 wherein, the receiving passage extends inwardly toward the socket cavity from an outer face of the side wall and the retaining recess is located on an inner face of the side wall and the diameter of the arcuate portion of the retaining recess is larger than the diameter of the arcuate portion of the receiving passage such that the receiving passage terminates at the retaining recess, and wherein a planar locking face is located at an end of the retaining recess proximal the receiving passage.

CLAIMS

1. An excavator wear member comprising:

a body;

a side wall having a mounting ear extending rearwardly of the body;

5 a socket cavity extending into the body and at least partially defined by the side wall, an upper wall and a lower wall, the socket cavity being symmetrical about a horizontal plane of the excavator wear member;

10 a locking aperture extending through the side wall of the excavator wear member, the locking aperture having a receiving passage having a generally circular main portion and a retaining recess having a generally circular main portion that is generally concentric with the generally circular main portion of the receiving passage;

15 wherein, the receiving passage extends inwardly toward the socket cavity from an outer face of the side wall and the retaining recess is located on an inner face of the side wall and the diameter of the generally circular main portion of the retaining recess is larger than the diameter of the generally circular main portion of the receiving passage such that the receiving passage terminates at the retaining recess, and wherein a planar locking face is located at an end of the retaining recess proximal the
20 receiving passage.

2. An excavator wear member as claimed in claim 1, wherein at least a part of the excavator wear member further comprises a body and a

~~mounting ear extending rearwardly of the body, the locking aperture extending~~ extends through the mounting ear.

3. An excavator wear member as claimed in any ~~one of the previous~~ claims any one of claims 1, 2, 4 or 5, wherein a ~~locking face is located at an inner end of the retaining recess~~ the planar locking face faces inwardly towards, and is open to, the socket cavity.

4. An excavator wear member adapted to be releasably mountable on an adaptor, the adaptor having a spigot portion and a mounting recess located on a side wall of the adaptor, the excavator wear member comprising:

a body;

a side wall having a mounting ear extending rearwardly of the body

and adapted to be at least partially located within the mounting recess of the adaptor;

a socket cavity extending into the body and at least partially defined by the side wall, an upper wall and a lower wall, the socket cavity being symmetrical about a horizontal plane of the excavator wear member and adapted to receive the spigot portion of the adaptor;

a locking aperture extending through the side wall of the excavator wear member, the locking aperture having a receiving passage having a generally circular main portion and a retaining recess having a generally

circular main portion that is generally concentric with the generally circular main portion of the receiving passage;

wherein, the receiving passage extends inwardly toward the socket cavity from an outer face of the side wall and the retaining recess is located on an inner face of the side wall and the diameter of the generally circular main portion of the retaining recess is larger than the diameter of the generally circular main portion of the receiving passage such that the receiving passage terminates at the retaining recess, and wherein a planar locking face is located at an end of the retaining recess proximal the receiving passage.

~~as claimed in any one of the previous claims, wherein the receiving passage has a generally circular main portion and the retaining recess has a generally circular main portion, wherein the generally circular main portion of the receiving passage is concentric with the generally circular main portion of the retaining recess.~~

5. An excavator wear member comprising:

a body;

a side wall having a mounting ear extending rearwardly of the body;

a socket cavity extending into the body and at least partially defined by the side wall, an upper wall and a lower wall, the socket cavity being symmetrical about a horizontal plane of the excavator wear member;

a locking aperture extending through the side wall of the excavator wear member, the locking aperture having a receiving passage that has a

cross sectional outline that is formed at least in part from an arcuate portion and a retaining recess that has a cross sectional outline that is formed at least in part from an arcuate portion;

5 wherein, the receiving passage extends inwardly toward the socket cavity from an outer face of the side wall and the retaining recess is located on an inner face of the side wall and the diameter of the arcuate portion of the retaining recess is larger than the diameter of the arcuate portion of the receiving passage such that the receiving passage terminates at the retaining recess, and wherein a planar locking face is located at an end of
10 the retaining recess proximal the receiving passage.

~~4. The excavator wear member of claim 4, wherein the generally circular main portion of the retaining recess has a larger diameter than the generally circular main portion of the receiving passage.~~
